

LG AVIRON

BREEDERS REFERENCE: LE17/332 TRIAL STATUS: RECOMMENDED UK

VERY VIGOROUS FULLY LOADED HYBRID DEMONSTRATING CONSISTENTLY HIGH YIELD POTENTIAL ACROSS ALL REGIONS AND SEASONS.

FULLY LOADED HYBRID

KEY STRENGTHS

Joint highest yielding variety on AHDB RL

Exceptional autumn and spring vigour

Suited to main to late drilling window

Fully loaded hybrid N-Flex, RLM7+, POSH, TuYV

Consistent high yield performance across all regions

AGRONOMIC PROFILE

Data from the AHDB Oilseed Rape Recommended List 2021/22. On the 1-9 scales, high figures indicate that a variety shows the character to a high degree (e.g. high resistance). Agronomic features marked with * are breeders perspective.

Resistance protects against the symptoms of TuYV: a virus transmitted by aphids which can cause up to 30% yield drop and 3% loss of oils.

Allows the crop to more efficiently utilise available nitrogen, enabling the variety to reach its genetic yield potential even in sub-optimal nitrogen situations.

Resistance helps protect against untimely seed losses around harvest caused by weather or combine passing through the crop.

Is gene-specific resistance to phoma stem canker and is included in combination with quantitative resistance in all our fully loaded hybrids.
