

Olympus

Consistent across all regions

Market Options: Grain Distilling & Feed

MBC Approval: MBC Approval

Olympus has consistently produced high yields across all of the AHDB regions. The variety also has high untreated yields; the result of having a strong disease resistance profile. Olympus is shorter than Odyssey, with a similar maturity to Concerto.

Olympus also has good grain quality, good specific weight and low screenings. With the variety's high yields and good straw attributes, Olympus is well suited as a northern feed barley. It carries Full Malting Barley Committee (MBC) Approval for grain distilling use.

Strengths

- Carries Full Malting Barley Committee (MBC) Approval for grain distilling use
- High yielding in every region
- Non-GN variety with good grain quality, good specific weight and low screenings
- Excellent disease resistance profile
- Good straw attributes
