

Rafaela

6-row winter barley with unique genetic traits of BYDV and BaYMV tolerance

Market Options: Feed

BaYMV Resistance: Yes

Rafaela offers growers the unique genetic traits of both Barley Yellow Dwarf Virus tolerance (BYDV) and Barley Yellow Mosaic Virus (BaYMV).

The conventional six-row winter barley also has very early spring development, a large plant canopy, tall straw and competes extremely well in the fight against black-grass. These characteristics, combined with strong disease resistance and high yields make Rafaela an exciting prospect.
