

Castlepark

Long term mixture for drought prone soils

Use: Dual Purpose & Hay and Haylage

Animal: Most Livestock

Length of use: Long Term (7+ Years)

Available with Clover: White Clover

Long term dual purpose mixture for drought prone soils.

Castlepark provides excellent early bite followed by reliable production throughout the season.

This mixture includes Tweed White Clover Blend to 'fix' free nitrogen and provide nutritional benefits to stock. Now includes Tall Fescue, which is widely used in Northern Europe for its tolerance to drought and heat.

Treated with HEADSTART® GOLD for improved establishment.

Strengths

- Good early bite and full season production
- Contains Tall Fescue and softer leaved Cocksfoot with drought resistance

- Best suited to heavily stocked situations
- Ideal for drought prone free draining soils
- Can be heavily grazed or cut for hay or silage

Technical Information

Castlepark should be grazed hard to prevent Cocksfoot from forming clumps.

Suggested seed rate:
13-18 kg/acre (33-45 kg/ha)

Guide cutting height:
10cm (4 inches)

For detailed information, download our [Sinclair McGill Grass and Forage Crops Handbook](#) or for your [local stockist](#), please contact your local distributor.
