

Glory Grain

High crimped grain yield

Maturity: Very Early

Sowing Type: Open & Plastic

High crimped grain yield.

High grain yield from an early harvest with rock solid performance, whatever the weather.

Strengths

- Glory has a high moist grain yield
- Glory remains free of disease with only a very low level of Fusarium infected ears
- Glory performs exceptionally well under plastic
- Glory is very early maturing and is suitable for marginal sites or later sowing
- Excellent Eyespot tolerance – one of the best 5 on the entire BSPB/NIAB List
- Full harvest flexibility, can be taken for grain or forage

Technical Information

See table below for technical information on Glory.

YIELD T/HA (@15% MC)	RELATIVE YIELD %	GRAIN MOISTURE %	FUSARIUM INFECTED EARS %
8.63	103	36.2	1.3
	MEDIUM	MEDIUM	VERY LOW
