

BTS 1140

PROVEN ON FARM

Agronomic Traits: High sugar content & High yield

One of the leading varieties for both 2019 & 2020 harvest

Strengths

- High adjusted tonnes: 101.8%
- High sugar yield: 101.8%
- High sugar content: 17.7%
- For normal and late sowing
- Rhizomania tolerant

Technical Information

Suitable for both Normal & Late sowing

Sowing period: Mid March, into April

**(Limagrain is the UK agent for Betaseed)
Experts Advice**

“BTS 1140 has been one of the most popular sugar beet varieties grown in the last couple of seasons and is set to continue as one of the leading market share varieties, due to its proven performance on farm. BTS 1140 is extremely reliable

and offers high yield potential, comparable to, or better than, many of the varieties on the new BBRO Recommended List 2021. Internal and Recommended List trials data over several years suggests that BTS 1140 should be sown in the normal to later drilling period on farm (see graph page 10). BTS 1140 has high sugar content combined with good foliar disease tolerance for both rust and powdery mildew, with limited data suggesting excellent downy mildew resistance.”
