

BTS 1915

SIGNIFICANTLY DIFFERENT

Agronomic Traits: High sugar content, High yield & BCN Tolerant

BTS 1915 provides an opportunity for growers who want to take the next step-up in yields. In doing so they are raising the bar in sugar beet production even higher, making themselves more resilient against the costs of producing a sugar beet crop.

High adjusted tonnes: Treated 108.2% Untreated 110.1%

Strengths

- The highest yielding variety available
- Very high consistency of yield performance
- High sugar content: 17.7%
- Excellent rust resistance: 8.7
- For normal and late sowing
- Rhizomania tolerant

Experts Advice

Breeders Comment:

Limagrains 

“The variety BTS 1915 has an exceptional 5.2% yield advantage over its nearest competitor and 8.2% over the mean of the treated control on the sugar beet Recommended List. Equally impressive is its superiority in the untreated trials series, namely 8.2% over its nearest competitor and 10.1% over the mean of the control. We normally expect to see year-on-year yield advances of 1 to 2% in yields, so BTS 1915 is something quite special and this is at a time when many other arable crop yields have plateaued. Nor is it a ‘one-year wonder’ performance. These extremely high yields have been consistent over the last three years.”
