

No.5 Long Term

Low input organic grass seed mixture

Use: Grazing & Extended Grazing

Length of use: Long Term

Animal: Dairy, Beef, Sheep, Other & Most Livestock

This mixture utilises a range of species which will thrive in lower fertility conditions and less favourable soil types.

Meadow fescue can, for example, outyield ryegrass in lower fertility soils and timothy will often produce more palatable herbage than perennial ryegrass when grown on wetter, heavy soils.

This mixture is ideal for land that you would prefer not to plough too often.

Strengths

- Wide range of grassland species
- Suitable for less fertile areas
- Includes white clover
- Ok for heavy soils

Technical Information

70% Organic seed content.

Rothwell, Market Rasen,
Lincolnshire, LN7 6DT
