Resistance protects against the symptoms of TuYV: a virus transmitted by aphids which can cause up to 30% yield drop and 3% loss of oils.

SOWING WINDOW

Recommended Sowing Period

Potential Sowing Period depending on seasonal conditions

Aspire is the only recommended conventional variety with crucial TuYV resistance. Aspire is a short robust plant type with very good straw characteristics. A solid disease and TuYV resistance means Aspire fits the early drilling option perfectly with its slower speed of development.
